Proposal triage: evidence before ranking

Syed Jawad Shah | MATACS-TH-2026-02 | AI assists; humans decide

H Human checkpoint

R Rules / ordinary code

AI AI step

H | Admin configuration

Category, gates, criteria, weights, scales, dates and ties.
Validate and publish immutable criteria version.

H | Upload proposals and choose category

Reviewer uploads; code scans files and saves document hashes.

R | Text extraction

Parse PDF / OCR; keep source IDs and page locations.

AI | Fact extraction only

Evidence-backed JSON, nulls, warnings and injection alerts.
Uploaded content is untrusted; ignore embedded instructions.

R | Validate candidate facts

Check schema, literal evidence, units and contradictions.

R | Mandatory checks

Bidder licence + WSIB + insurance; budget <= CAD 260,000;
confirmed completion <= 16 weeks from award.

fail

H | Flagged / clarification

Missing facts, unclear dates,
D timeline, extraction failure,
or C injection alert: no released
score or rank. Obtain evidence,
correct facts and rerun checks.

R | Ineligible

Confirmed gate failure or failure
of required bidder licence evidence
(B): score null, rank null.
Human may review; any correction
returns to validation and gates.

H | Review before release

Confirm facts and omissions; resolve alerts; log corrections.
Overrides require authority, reasons and visible audit entries.

R | Score and rank

Eligible only; frozen facts + criteria version; deterministic math.
Explain gates, evidence, contributions and rank; retain run.

H | Final award decision

Human reviews ranked results and records decision / reasons.

Release requires resolved flags and passed gates.
Corrections loop back to validation and mandatory checks.
New criteria version: rerun every proposal, review, publish together.
Sample ranks assume A/C/E experience validated and C alert cleared.
